1

## RAINWATER HARVESTING

The installation of a tank that is filled automatically when it rains. This will require the installation of suitable guttering and piping to transport rainwater to the tank.

- Free and unlimited water supply (when it rains)
- Store rainwater accessed from roof
- Rainwater filtered prior to entering tank
- Water suitable for irrigation, washing, topping up the pool, etc.

*\*\* If used for consumption, additional filtration is required.*

2

## MUNICIPAL BACKUP

The installation of a tank that is filled automatically when mains water is available. This water can then be utilised in the event of a cut-off from mains supply.

- Uninterrupted water supply
- Tank filled with municipal water
- Pump water from tank back into home
- Pressure sensor starts and stops pump operation

*\*\* Water is normally for consumption, but this may vary based on the quality of your water. If unsure, rather opt for a water filter.*

3

## FULLY INTEGRATED

The installation of a tank that is filled with both rainwater and municipal water. This water is filtered and utilised for full domestic water supply.

- Combination of both municipal backup & rainwater harvesting.
- Ensures water is always available
- Tank filled with municipal water (pre-determined min. level required) and rainwater (remaining space)

Mon-Fri 8.00 AM - 17.00 PM  
Sat 8.00 AM - 13.00 PM
